Fang Meng, SAS Institute Inc.

Fang Meng is Test at SAS Institute Inc. Beijing R&D. I work in SAS solution validation and implementation support in CI products.

Elizabeth Bales, SAS Institute Inc.

Elizabeth is a Senior Software Manager in the Platform Research and Development Division at SAS Institute. Elizabeth manages the Software Globalization R&D team which provides Internationalization (I18N) features for SAS products and tools that find I18N violations in software.

Using CVP for the Best Migration Experience

Fang Meng, SAS Institute Inc.

Outline

- Transcode character variables to SAS Viya with CEDA
- Expand the character variables space with CVP engine in SAS Viya
- Migrate format catalogs to SAS Viya
- Migrate indexes to SAS Viya
- Demo

Transcode character variables to UTF-8 encoding with CEDA(1/2)

#SASGF

- Cross Environment Data Access (CEDA)
 - Transcode the characters in input data from its original encoding to the current session encoding if the encodings are not the same.
 - Run automatically and transparently.

```
ENCODING=UTF-8    Specifies the default character-set encoding for the SAS session.
NOTE: PROCEDURE OPTIONS used (Total process time):
      real time          0.00 seconds
      cpu time           0.00 seconds

75      /* Print observations of a SAS data set with euc-cn encoding in SAS Viya with UTF8 session */
76      proc print data = euclib.class_cn;
NOTE: Data file EUCLIB.CLASS_CN.DATA is in a format that is native to another host, or the file encoding does not match the session
      encoding. Cross Environment Data Access will be used, which might require additional CPU resources and might reduce
      performance.
77      run;
```

Transcode character variables to UTF-8 encoding with CEDA(2/2)

#SASGF

- Truncation warnings or errors occur when the length of character variable is not enough to store the UTF-8 characters.

| Euro symbol | WLATIN1 | UTF-8 |
|-------------|---------|--------|
| € | 80 | E282AC |

1 byte

3 bytes

Using **CVP** engine to expand the space of character variables.

Using CVP Engine to expand the space (1/2)

- Character Variables Padding (CVP) engine expands the length of character variables. By default, the expansion amount is 1.5 times in 9.4M5, and 0(AUTO) in SAS Viya.

| # | Variable | Type | Len | Format |
|---|------------|------|-----|-----------|
| 5 | Cylinders | Num | 8 | BEST12. |
| 8 | DriveTrain | Char | 9 | \$DRIVEN. |
| 4 | EngineSize | Num | 8 | BEST12. |
| 6 | Horsepower | Num | 8 | BEST12. |
| 3 | MSRP | Num | 8 | NLMNY16. |
| 1 | Make | Char | 37 | \$15. |
| 2 | Model | Char | 40 | \$39. |
| 7 | Origin | Char | 4 | \$4. |

CVP LIBNAME

```
libname euclib2 CVP "/home/sasdemo/demoscript/data";
proc contents data=euclib2.carsinfo;
run;
```

| # | Variable | Type | Len | Format |
|---|------------|------|-----|-----------|
| 5 | Cylinders | Num | 8 | BEST12. |
| 8 | DriveTrain | Char | 14 | \$DRIVEN. |
| 4 | EngineSize | Num | 8 | BEST12. |
| 6 | Horsepower | Num | 8 | BEST12. |
| 3 | MSRP | Num | 8 | NLMNY16. |
| 1 | Make | Char | 56 | \$23. |
| 2 | Model | Char | 60 | \$59. |
| 7 | Origin | Char | 6 | \$6. |

Using CVP Engine to expand the space (2/2)

- CVPMULTIPLIER can specify the expansion amount.
- CVPBYTES can specify the number of bytes.
- CVPFORMATWIDTH can specify whether to expand the character format width.

| | | |
|-------------------|-----------|---------------|
| WLATIN1 1 byte | Character | Column Length |
| | € | 1 |
| UTF-8 3 byte | Character | Column Length |
| | € | 3 |

```
/* Expand the character variables length 3 times*/  
libname euclib2 CVP "/home/sasdemo/demoscript/data" CVPMULTIPLIER=3;
```

Migrate Format Catalog to UTF-8 (1/2)

- CEDA does not transcode characters in format catalog.
- If you created user-defined formats in another encoding, you will need to migrate those to the SAS Viya manually.

| Alphabetic List of Variables and Attributes | | | | | | |
|---|------------|------|-----|------------------|----------|-----------|
| # | Variable | Type | Len | Format | Informat | Label |
| 5 | Cylinders | Num | 8 | BEST12. | BEST32. | 气缸 |
| 8 | DriveTrain | Char | 9 | \$DRIVEN. | \$9. | 传动系 |
| 4 | EngineSize | Num | 8 | BEST12. | BEST32. | 发动机尺寸 (L) |
| 6 | Horsepower | Num | 8 | BEST12. | BEST32. | 马力 |
| 3 | MSRP | Num | 8 | NLMNY16. | BEST32. | 建议零售价 |
| 1 | Make | Char | 37 | \$15. | \$15. | 制造商 |
| 2 | Model | Char | 40 | \$39. | \$39. | 型号 |
| 7 | Origin | Char | 4 | \$4. | \$4. | 原产 |

```

/*
 * The definition of
 * the user-defined format.
 */

proc format lib=euclib;
value $driven 'D'='双驱动'
              'F'='前驱动'
              'R'='后驱动';

run;

```

Migrate Format Catalog to UTF-8 (2/2)

- Steps to migrate the format catalog to UTF-8 session.

1. Output format catalog to SAS data set in the SAS session where you created the format.

```
/* Create format data set in EUC-CN Session */  
libname euclib "C:\SGF2020\use cvp to_migrate_to_viya";  
proc format cntlout=euclib.cnformat lib=euclib;  
run;  
  
data euclib.cnformat;  
  set euclib.cnformat;  
  keep FMTNAME START LABEL TYPE;  
run;
```

2. Re-create the format using the outputted SAS data set in SAS Viya

```
/* Run the code in SAS Viya with UTF-8 encoding */  
libname euclib2 CVP "/home/sasdemo/demoscript/data";  
libname u8lib "/home/sasdemo/demoscript/u8_data";  
  
proc format cntlin=euclib2.cnformat lib=u8lib;  
run;
```

Migrate indexes (1/2)

- CEDA does not always transcode characters in indexes.
- To migrate indexes, it is required to re-create them in UTF-8.

Migrate indexes (2/2)

- Steps to migrate the indexes to UTF-8 session.

1. Output SAS index to a SAS data set in the SAS session where you created the SAS index.

```
/* Output the index in EUC-CN session */  
proc datasets lib=euclib nolist;  
  contents data=carsinfo out2= euclib.index;  
quit;
```

2. Get the code from Recreate column.

| Obs | Libname | Member | Numvars | Name | Type | Recreate |
|-----|---------|----------|---------|------|-------|---------------------------------------|
| 1 | EUCLIB | CARSINFO | 1 | Make | Index | Index create Make / Updatecentiles=5; |

3. Re-create the index for migrated UTF-8 SAS data set.

```
/* Recreate the index in UTF-8 session*/  
proc datasets lib=u8lib nolist;  
  modify carsinfo;  
  Index create Make / Updatecentiles=5;  
quit;
```

USERS PROGRAM

SAS® **GLOBAL FORUM** 2020

SAS and all other SAS Institute Inc. product or service names are registered trademarks or trademarks of SAS Institute Inc. in the USA and other countries. ® Indicates USA registration. Other brand and product names are trademarks of their respective companies.

Take Away

- Cross Environment Data Access
- CVP can expand the character variable length
 - CVPMULTIPLIER
 - CVPBYTES
 - CVPFORMATWIDTH
- SAS Format and index
 - Migrate manually (format procedure)
 - Migrate manually (datasets procedure)

Thank you!

Reminder:

Complete your session survey in the conference mobile app.

The background of the entire graphic is a scenic photograph of Washington, D.C. On the left, there are cherry blossom trees with pink and white flowers. In the center, a dark blue square contains the event title. On the right, the Washington Monument stands tall against a sky with vibrant sunset colors of orange, pink, and purple. The foreground shows a body of water reflecting the sky and the monument.
